

CPE 301 Final Project

Henry Dalton

Design: I ran out of time trying to get the DHT sensor and LCD working, only being successful with one of them, and somewhat haphazardly got the parts working that I could and put them together. I should have started this much earlier, and I'm disappointed in this as my best effort, but I'm turning in what I have after working on this for about 12 hours straight.

Video is in github.
